

Röchling

Industrial

# Smart Plastics

We digitalise plastics for your industry.

# Why is developing smart components more important than ever?

Improving processes is an ongoing task in each company. Röchling Industrial provides more than solutions. We provide intelligent wear parts which help learning and improving daily processes. By using smart components with implemented sensors you are able to measure crucial factors:

Temperature

Wear

Water flow

Loading pressure

Noise level

Your data?

## Which data do you need to optimize your processes?

# Traditional Business

# Smart Plastics

# WHAT ARE **SMART PLASTICS?**

Explained using the Mining industry

Is there any data you are already collecting?

What data would you need?

How can we support you?

Smartbox

Röchling

IoT Platform Portus

Industrial

# Smart Wear

## Which problem is solved for the customer?

- Development of temperature sensor + wear sensor in one
- ! Zero Downtime! Wear and temperature monitoring avoid unexpected production downtimes due to defective functional parts
- ⚙ Maintenance only if necessary → Cost savings!
- 📈 Increased transparency through platform: Documentation!
- 🛒 Auto-Ordering of new components

# Smartbox

- **Collects data and sends it to the IoT platform**
- **Mobile radio connection (no company network access required)**
- **Number of sensors per Smart Box: 1 to 6**

## Technical data:

- 230V power supply
- Sensor states: worn-out (yes/no), temperature, connected to Smart Box (yes/no)
- Measuring principle: resistive
- Smart Box dimension (mm): 350 x 250 x 180
- Maximum recommended cable length from sensor to Smart Box: 50 m

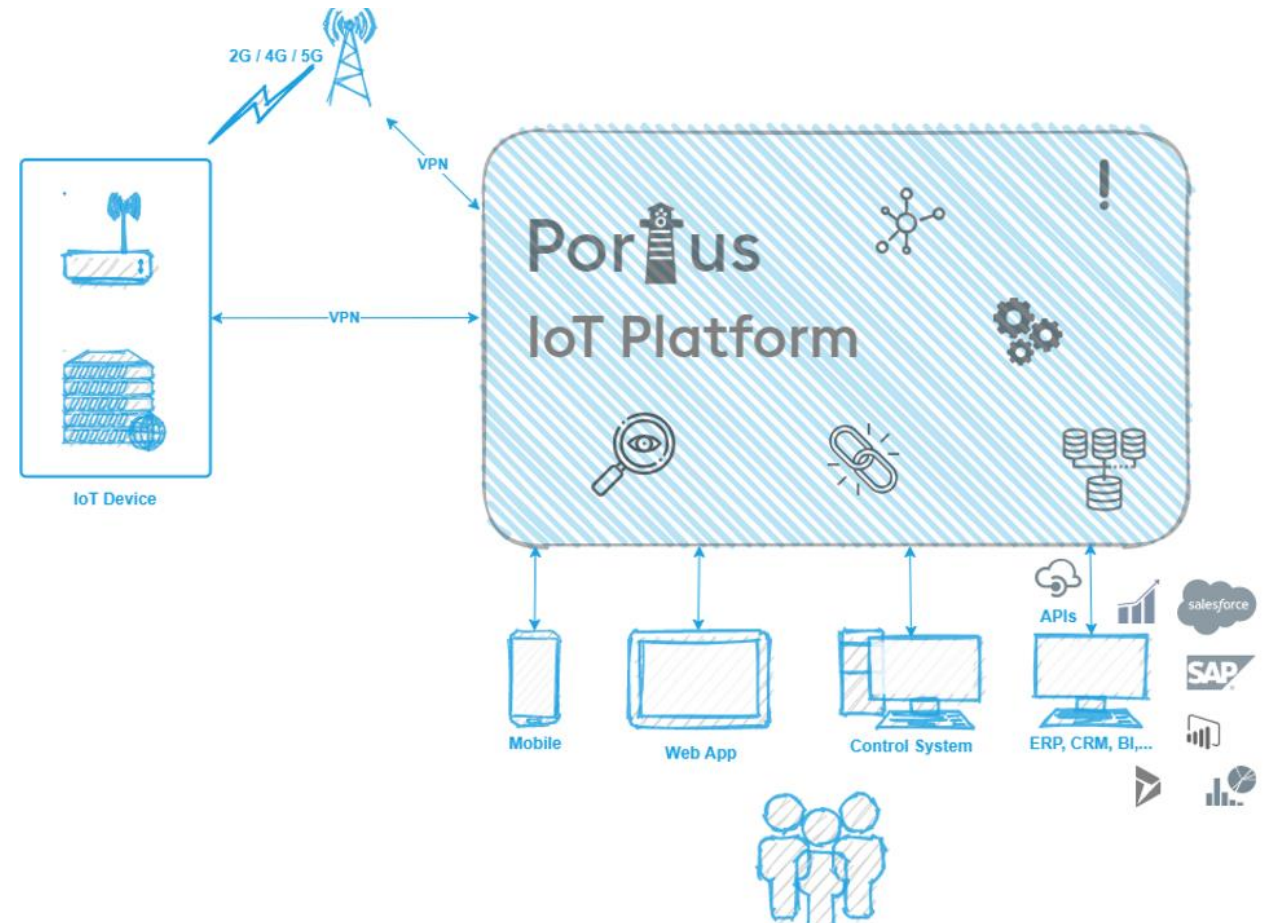

# IoT Platform Portus

Insights

# IoT platform | Portus

## Details

- The **Internet of Things** (IoT) connects products, processes and employees to drive digital change
  - connected devices/components can actively interact with another
- **IoT Platform:** place where data is collected, bundled and evaluated → Portus
- Portus is a digital product which is offered to the customer

# IoT platform | Portus

## Features

### Platform features

- Dashboard about machines equipped with smart products
- Microapp structure: Different apps for different use cases (Smart wear, Smart stock, ...)
- 24/7 Notification
- Interface to your ERP system available

### Smart wear features

- State visualization and event notification (over-temperature, ...)
- Temperature and worn-out diagrams
- OEM customer has access to end customer applications/devices
- End customer has access to to all of his applications/devices
- Customizing of application title and wear part titles

# Industry success stories

# Industry success stories

## Mining – wear sensor

Linings and conveyors in mining are exposed to extreme loads. Bunkers need to be empty to check wear plates – not if they are smart and enable remote condition monitoring during operation.

# Impact bed

## Mining | Product example

- Impact bed protects conveyor belt against damage in impact areas
- Wear and temperature sensors in impact bars helps to control wear / temperature damage status of impact bar
- Predictive maintenance
- „Full-service package“: Smart Stock with i. automated spare part order

# Industry success stories

## Oil & Gas – wear sensor

Source: menck.com

**Röchling**

**+18%**  
In productivity due  
to less down time

**400.000 €**  
Lower maintenance  
costs due to smart  
sensor control

Protected  
environment thanks  
to lower lubricant  
consumption

Industrial

# Industry success stories

## Paper – automated parts with temperature/moisture sensors

### Smart Table

Intelligent paper machine wire section with embedded smart sensoric in dewatering elements

SAVES 1000 tons  
CO<sub>2</sub>  
per year

5%  
Increase in production  
& optimized paper  
quality

# Industry success stories

## Agriculture – wear/humidity sensor

**Röchling**

Wear parts, like skid plates in harvesters, sliding on the soil, are equipped with smart sensors to provide essential data

- Humidity measurement and field mapping
- Ration calculation based on dry matter

**Autonomic run  
of machines**

**10%**

Higher efficiency  
through online wear  
detection

**Industrial**

Ongoing development accompanies us for a lifetime. As “Smart plastics” is one of our strategic Röchling Industrial innovation focus, developing smart products together with our customers across all industries needs to be our common goal.

We want to be the innovation leader in the plastics industry!
